

GO FARTHER, SEE MORE

WHERE WE STARTED

DENALI was founded in 2012 with the introduction of an innovative LED lighting kit purpose built for the under-served motorcycle market. When halogen and HID lighting was industry standard, DENALI focused on advancing LED technology to develop the brightest most compact lights available that would draw the least amount of power from the motorcycle. DENALI has continued to be an industry leader developing the first dual intensity LED light kit, as well as the only pulse width modulating controller that integrates the LED intensity setting into the motorcycle's original high beam switch.

WHY CHOOSE DENALI?

SAFETY FIRST

Be seen, be heard, stay safe. It's what we do, it's why we created DENALI. Life on two wheels (& four) is dangerous - which is why it's so damn fun! Our products are created and engineered to help you push your limits without sacrificing your safety.

UNPARALLELED PERFORMANCE

Our quest to develop ultra compact lighting for Power-sports applications forced us outside the status quo and resulted in our proprietary construction and optic design that enables us to outperform competitors lights twice our size.

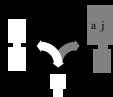

INTELLIGENT LIGHTING CONTROL

Say goodbye to old-school on / off only. Our DataDim enabled light pods paired with our smart lighting controllers give you unparalleled control over your electronics and unlock smart features and settings that automatically adapt auxiliary lighting to your vehicle and your environment.

OE INTEGRATION

We offer more plug-&-play wiring solutions and vehicle-specific light and horn mounts than any other brand, and we don't stop there. Our CANsmart technology allows us to read vehicle data in real time to deliver a seamless aftermarket experience that doesn't just meet OE standards but exceeds them.

MODULAR BY DESIGN

Our TriOptic interchangeable lens system, DRL visibility line, and T3 switchback turn signal line are just a few examples of how our modular design philosophy can deliver infinitely more solutions for any vehicle type from a simple set of well thought out components.

DURABILITY DNA

Designed for NASA, abused in the mines in South Africa, and proven on the washboard highways in Alaska. Our high-stakes commercial and industrial customers demand nothing short of indestructible when used 24-7 in the most extreme environments on earth.

OUR PRODUCTS

LED Lighting

See more of the road in front of you while driving at night

SoundBomb Horns

Command attention and avoid unnecessary accidents

Switches & Controllers

Consolidates all your accessory wiring and control into one intelligent unit

Vehicle-Specific Solutions

Plug-and-play upgrades to maximize visibility & control

Standard Powersport Harness

Our Standard Powersports Wiring Harness features high-quality waterproof components and is designed to power two DENALI 2.0 LED Light Pods.

Premium Powersport Harness

The harness includes a completely sealed, waterproof switch that was engineered from the ground up to withstand harsh out-door abuse on powersports vehicles. Can be either flush or bar mounted.

"Good"

Gets the job done quick and easy

"Better"

Cleaner install with upgraded switch

Picking the right harness for lighting

Choose the proper wiring harness to match your install and functionality needs

DialDim™ Lighting Controller

The DialDim features a multicolor halo dimming switch that allows you to independently turn on/off and dim two sets of auxiliary lights from a single consolidated wiring harness.

FEATURES:

- High/Low Sync
- ON/OFF and Dim
- Stealth Mode
- Cancel Or Flash W/ Turn Signal
- Plug & Play Horn Installation
- Strobe with Horn
- Electronically Fused Circuits
- Voltage Display Indicator
- Low Voltage Cutoff

“Best”

I want more control over multiple sets of driving lights

OUR PRODUCTS

CANsmart™ Controller

Simply connect the CANsmart™ Controller to your motorcycle diagnostic port to access over 35 programmable accessory settings that provide intelligent control of auxiliary lights, horns, brake lights, or any other accessory you can imagine.

FEATURES:

- High/Low Sync
- ON/OFF and Dim
- Modulate Lights
- Flash to Pass
- Cancel Or Flash W/ Turn Signal
- Plug & Play Horn Installation
- Strobe with Horn
- Deceleration Activated “Smart Brake” Technology
- Flash Pattern Braking
- Switched Power Source
- Delay Time Out
- On Board Power

“Next Level”

I want the ultimate integrated control over all my lighting

LED HEADLIGHTS

The DOT modules drop right into your existing light housings (motorcycle or Jeep) or can be used in custom applications. Shines three times further than your stock halogen headlight and twice as far as a stock LED headlight.

Our Enduro Kits are the easiest and most low-profile way to add our industry-leading offroad lighting to your enduro motorcycle.
