INTRO

INDUSTRY LEADING

Kaoko Throttle Stabilizers are world renowned for their simplicity and high quality.

WORLD CLASS

All Kaoko Throttle Stabilizers are designed specifically for your bike's make and model. Our workmanship and materials are of the highest engineering standards and we are constantly growing our range of available controls.

“designed by
motorcyclists,
to work for
motorcyclists”

BASIC OPERATION

1. Place hand over unit
Grip the throttle as normal, making sure you feel the friction nut on the outside of your pinky finger and palm.

2. Twist throttle as normal
Open throttle as normal. Once the desired speed is reached, then enjoy lighter grip and even momentarily free hand from the throttle.

3. Enjoy stabilization,
The additional frictional resistance on the throttle sleeve enables a smoother and more stable ride.

4. Place hand over unit
Place hand over unit. Decelerate as normal, making sure you feel the friction nut on the outside of your pinky finger and palm.

CATEGORIES

maxi scooter

People are commuting more and more with scooters – whether it's on the highway or in peak hour traffic, there is no denying their manoeuvrability and ease of use for everyday commuting.

Having a **Kaoko Throttle Stabilizer** fitted can make your everyday commute more comfortable by allowing you to cruise even at low speeds by adding rotational resistance to the throttle, thus keeping your throttle in place, freeing up tension in your hand and wrist

electronic cruise controls

Kaoko Throttle Stabilizers can be engaged at any speed - as opposed to electronic cruise controls which can generally only be engaged over 40 to 60Km/h. The Kaoko is a perfect accessory for throttle stability at any speed and can be used in conjunction with electronic cruise controls to suit varying riding conditions.

Electronic Cruise Control is not a substitute for the Kaoko. Both systems should be available on the bike.

RIDE-BY-WIRE

* ELECTRONIC CRUISE CONTROL SHOULD NEVER BE CONSIDERED A SUBSTITUTE FOR A KAAKO THROTTLE STABILIZER.

Because of fly-by wire's responsiveness, your bike's throttle can often feel twitchy. However, when using a Kaoko in conjunction with your ride-by-wire throttle, you can eliminate the twitchy response.

This is because the Kaoko – when fully or partially engaged – adds just enough friction & rotational resistance for more throttle control! This is achieved by the Kaoko applying rotational resistance to the throttle.

LIFESTYLE RIDING

CHOPPERS, HOGS, CRUISERS, TOURERS, SUPERBIKES & CUSTOMS

When riding on the open road, especially on longer trips – it can be very cumbersome to keep your throttle open for extended periods of time.

The **Kaoko Throttle Stabilizer** offers the luxury of keeping your throttle in place so that your hand and wrist can feel comfortable at all times – even allowing you to take your hand off the throttle.

“the Kaoko cruise control is
an easy choice to make.”

- RIDE ADVENTURES

ADVENTURE RIDING

Off-road riding on bumpy roads can often cause you to clench your throttle to maintain throttle control, potentially causing wrist strain.

This is where a **Kaoko Throttle Stabilizer** enhances rider comfort by adding rotational resistance to the throttle sleeve making off-road riding much easier on the wrist.

ON DISCOVERY

HOW DO WE COMPARE TO THE COMPETITION?

Kaoko consists of only one moving part: the innovative friction nut, which cannot fail

Engaging and disengaging is natural and intuitive. It uses the same hand movement as opening and closing the throttle.

Kaoko has a bike-specific design and the KAOKO handlebar end weight/shape match the original bar end and the item looks like original equipment. Bike-specific designs are available for scooters, cruisers, superbikes and adventure bikes.

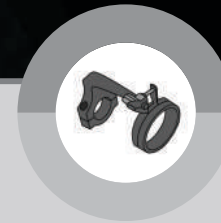

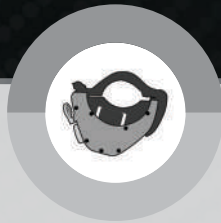

Kaoko takes up no grip space: It is neatly mounted to the end of the handlebar, not impeding the rider's thumb from operating any other switchgear

Kaoko is manufactured from high quality engineering materials. The friction nut is manufactured from a high-grade, purposely selected engineering plastic, featuring excellent durability, stability and self-lubricating properties.

The Kaoko unit is bolted onto the handlebar and cannot be removed without proper tools - meaning it is not susceptible to theft.

The Kaoko unit comes with a 5-year functional Guarantee. However, it should normally last the lifetime of the motorcycle it is fitted to.

The Kaoko unit has a quick and easy bolt-on installation that generally requires no modifications.

SUPPORTED MANUFACTURERS

BASIC INSTALLATION

Nothing simpler!

There are many variations of throttle clamps on the market. But none of them reach the reliability, level of use or aesthetic value that the **Kaoko Throttle Stabilizer** exudes.

It's as easy as:

1.

Remove bar-end

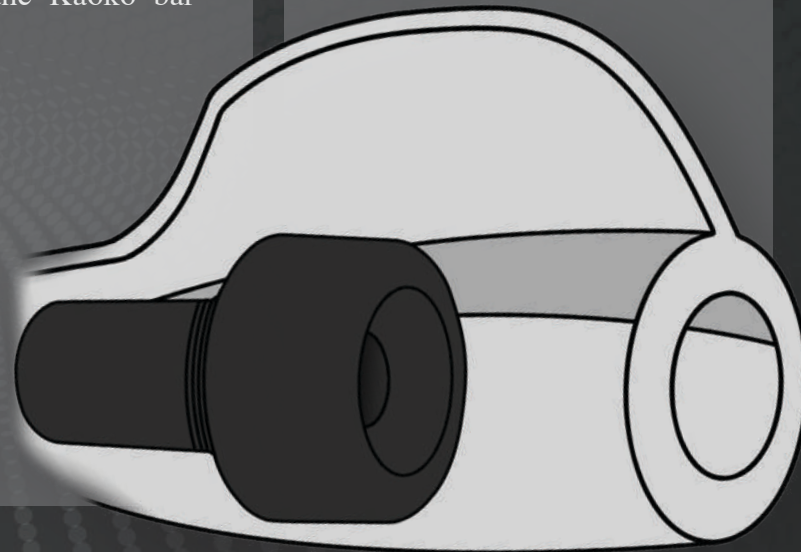

With the correct tool, remove your currently equipped bar-end weight.

2.

Replace & Fit

Simply replace your bar-end weight with the Kaoko bar-end weight.

3.

Set & Test

Set the grub screw to the desired resistance and test fit for basic operation.

DESIGN EXCELLENCE AWARDS 2009

In 2009 Kaoko won the prestigious SABS Design Excellence Award for the **Kaoko™ Throttle Stabilizer**

RSA

7 REASONS WE CHOOSE KAOKO EVERY TIME

INTERNATIONALLY TESTED & APPROVED

Kaoko carries the prestigious SABS Design Excellence Award from 2009 and our products are sold worldwide through our distributor networks.

5 YEAR FUNCTIONAL GUARANTEE

Each Kaoko Throttle Stabilizer comes with a 5 year functional guarantee and should last the lifetime of the motorcycle that it's fitted to. The control also requires little to no maintenance.

ZERO INCIDENTS - ZERO SAFETY ISSUES

There have been NO safety related incidents from anyone using a Kaoko Throttle Stabilizer and is 100% safe in the hands of a responsible and experienced rider.

FROM OEM TO AFTERMARKET

We offer a range of throttle stabilizers that are compatible with aftermarket accessories, including Barkbusters, R&G sliders and CRG Mirrors.

UNIVERSAL & BIKE SPECIFIC

We design products that are specifically tailored to your motorcycle. We also have universal kits that can be used with a variety of aftermarket setups.

CANNOT LOCK - INSTANT OVERRIDE

The Kaoko Throttle Stabilizer only applies friction to the throttle sleeve and does not completely lock your throttle. Your throttle can always be opened or closed even when the control is fully engaged.

EASY INSTALL - ONLY TAKES 5-10MINS

Fitting a Kaoko is quick & simple and can be done in a matter of minutes.

Cannot lock

Can be **overridden in an instant**

Operation is **natural and instinctive**

NO safety related incidents

Fully trusted by “Big Name” distributors in USA, Europe and Australia

100% safe in the hands of a responsible and experienced rider

5 Year Functional Guarantee, however the Kaoko Throttle Stabilizer should last the life of the motorcycle that it is fitted to.
